Susan Parrish

Presenter

Enablement Specialist - Cisco

Vanesa Melendez

Facilitator

Enablement Specialist - Cisco

Agenda

1. Frame the challenge
2. Form teams and design
3. Present your findings
4. Discuss
5. Debrief and close

Design for what the customer
needs....
not what the legacy system
already has.

Today, you will practice three moves

Listen beyond the request

Separate pain points
from desired
outcomes.

Choose the right fit

Map needs to
features, constraints,
and tradeoffs. Know
when not to add more.

Defend the design

Explain the why and
how you would test it.

Think like an architect, not a catalog

The strongest answer is not the longest feature list.
It is the smallest design that creates an agreeable, desirable outcome

LISTEN

Pain + desired
outcome

QUESTION

Clarify + improve

MAP

Need + design choice

EXPLAIN

WIIFM + tradeoff

Good design starts with conversation

- **Bring your expertise and stay curious**
- Share ideas
- Ask questions
- Test assumptions
- **There's not always one right answer**

Meet your customers

Retail and
Wholesale
Distribution

“

As we've grown, calls are harder to route, employees are always on the move in stores, and our warehouse teams lack the context and communication they need.

Jessica Bean
Chief Operating Officer

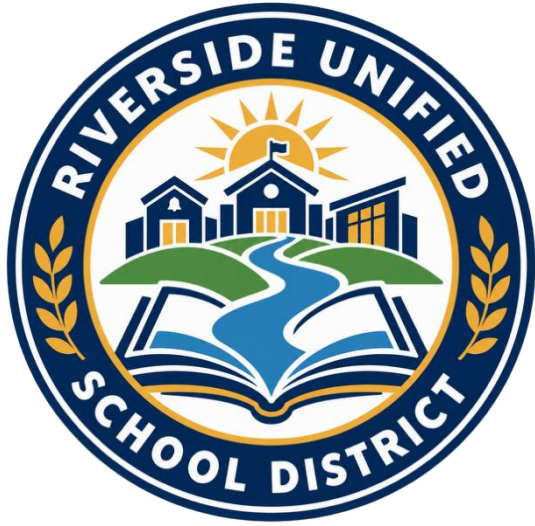

Pain

- Mobile work
- Fragmented wholesale service

Outcome

- Professional reachability
- Account-aware support

K-12
Public
School
District

“

Families struggle to reach the right school or staff member, causing unnecessary transfers, missed attendance messages, and inconsistent bilingual updates during schedule changes.

Dr. Maya Reynolds

Executive Director of Technology Services

Pain

- Too many transfers
- Inconsistent call handling

Outcome

- Families contact the right school and staff member easily

Enough hold music...

It's time to turn pain points into power moves!

Ready, set.... Design & defend.

Getting started

1. **Form** a team of 4-6
2. **Customer assignment:** logo on your table
3. **Name** a facilitator, scribe, and spokesperson
4. **Select** features that solve the need
5. **Record** your findings
6. **Prepare** a two to three-minute recommendation.

Present your findings

3

Priority pains in
the customer's
words

3

Discovery
questions or
explicit
assumptions

7-8

Requirements mapped
to the design

1

Additional
recommendation
based on your
experience

What we learned

Three habits make better calling designs

Ask before mapping

Translate customer voice into outcomes, constraints, and missing facts.

Choose intentionally

Use the smallest coherent feature set that solves the business problem.

Explain

Customers should know *What's In It For Me* (WIIFM) and any trade offs

Start with the customer's desired
outcome.

Then earn every feature.

That's the power move.
